## ■ Foreword

**G**iven the results, it's reasonably simple to say that establishing the National Monitoring Centre on Clinical Trials of Drugs - OsSC – has been a positive step forward. Not only has Italy availed itself of an innovative body for monitoring its pharmacological research, but it has also paved the way for concepts and ideas that are currently being adopted in numerous other countries.

The underlying theme of this entire project has been the concept of "service" to the community (scientific and non); having linked every health structure, including Ethics committees, has been an enormous leap forward, favoured by the rapid evolution of technologies, and certainly boosted by a desire for scientific and cultural development.

In Europe, Italy has been the first country to "open" its registry to the public; the so-called Ottawa Statement, which stipulates which content of research needs to be made public, has been fully embraced by national institutions. Their aim has been to provide citizens with information, in many cases useful for them to interact with clinical research centres to verify the possibility of a citizen being an "active part" in new pharmacological research.

The OsSC has been connected to the European data-warehouse EudraCT since 2004, pursuant to the European directive 2001/20; this has given us the possibility to compare our work with other colleagues and other "research" cultures. Nevertheless, national qualities were certainly taken into consideration given that Italy was included in the group of countries that shall develop the European data-warehouse under the supervision of the European Medicines Agency (EMA).

As a result, numerous sister projects have sprung from the original project; indeed, observational studies have now their own registry, which can certainly be improved, which will soon enable the scientific community to be informed on these kind of important post-marketing researches.

All this has been enclosed in what can be considered as a "portal" of clinical research, where anyone can access numerous publicly useful facts.

Having set up this important registry has enabled us to "monitor" the types of national clinical research over a period of time, identifying grey areas where a prudent country would earmark some investment. This is the focus of the AIFA research projects: over 200 projects in public health structures have been financed to date. These projects are beginning to provide interesting results that could somewhat alter clinical practices in forthcoming years.

Another forthcoming groundbreaking leap shall be the introduction of an online computerised management system for all documentation related to the start-up and running of all clinical experimentation. The e-submission project, which has attracted numerous volunteers that we'd like to thank publicly, has reached the final stages of the tests and in the following months it shall be representing the national benchmark, newly placing Italy among the pioneering countries for maximum use of technologies (at least in this sector).

The information in this 10<sup>th</sup> National Report illustrates the reaching of one of the OsSC's targets: to represent a tool for managing an activity which is fundamental both for boosting knowledge and providing quality assistance, based essentially on research.

It is often difficult and sometimes pointless to measure gains and losses, however the experience of this 10-year project undisputedly shows that even in the complex Public Administration a long-term intelligent management and development project can be set up, and looked upon admiringly from abroad. Naturally, this is thanks to the numerous people who have given their efforts, professionalism and selflessness to the projects, and who never forgot that they were proud owners of unique Italian creativity in the world.

In the forthcoming years our objective shall be to never waste energy and efforts, continuing to "serve" the community in the best way possible, putting professionalism and hopefully further successful ideas on the table.

Enjoy reading,

Head of Research and Clinical Trial Unit  
Italian Medicines Agency

## ***Overview***

---

## ■ Italy and the evolution of clinical trials of drugs

The National Report on clinical trials of drugs has reached its tenth edition. This is a significant update of qualitative and quantitative information regarding Italian clinical research highly anticipated by the entire pharmaceutical industry.

Despite the fact that in 2010 there weren't so many legislations published, it is worth noticing that the groundwork for a legislative decree approved by the cabinet in March contains a significant section dedicated to clinical research. This shall represent a considerable task for the supervisory authorities and the Ministry of Health to enact a more flexible legislation, simpler and competitive that governs clinical research for the future.

The contents of the legislative decree can be summarised as below:

- shuffling and reorganisation of Ethics committees;
- identification of authorised centre's requirements for clinical trials from phase 0 to phase IV;
- identification of the means of supporting activation and optimisation of clinical centres dedicated to phase 0 and phase I clinical trials, both on patients as well as on healthy volunteers;
- simplification of the red tape concerning applications for an Ethics committee's opinion and its evaluation of a clinical study, specifically concerning:
  - computerised procedures to manage the documentation related to the application to be submitted for the Ethics committee's opinion and for the start up of clinical trials;
  - procedures for the recognition of clinical trials carried out abroad;
  - authorisation procedures for carrying out clinical trials with particular medical products;
- revision of the alert system for adverse reactions and events which may occur during the trial;

- development of a national roll to coordinate every activity and strategy concerning clinical experimentation on drugs;
- defining the evaluation procedure and authorisation process for a clinical experimentation by:
  - identifying the role of the competent authority;
  - identifying the role of the legal representative of the health structure where the clinical trial is intended to be carried out;
  - identification of the tasks and aims of the Ethics committees from a national, regional and local point of view;
  - defining the minimum contents to be presented in the contracts for clinical trials;
- use of computerised support systems for clinical trials that foresee:
  - evaluation systems for the performance of public health structures concerning clinical trials;
  - completion of a consultation website for public access;
  - using the OsSC to exchange documentation regarding clinical trials using predefined forms available on the system;
- identifying the criteria for setting up Post-Graduate studies on carrying out and managing controlled clinical trials (research doctor and data manager).

Likewise, the much anticipated e-submission project has almost been completed. This shall enable the OsSC to operate as an integrated system for the computerised preparing and sending of applications to the competent authorities and Ethics committees for their single opinions in a format pursuant to the European guidelines. The same "CTA" Ministerial Decree introduced further procedures and forms, for communicating the Ethics committee's decisions to the OsSC and for monitoring trials (start-up and closure of clinical centres). This platform shall undergo a new phase of testing that will be started up by the end of this year by the representatives of the technical roundtables, and gradually extended to every operator in the OsSC.

The aim is to introduce the e-submission project as an instrument to simplify bureaucracy, stan-

dardise the procedures and reduce time for sending documentation and decisions to the Ethics committees and competent authorities.

## **■ 10<sup>th</sup> National Report on Clinical Trials of Drugs**

The studies taken into consideration in this 10<sup>th</sup> Report are those the Ethics committee of the co-ordinating centre has submitted its approving data to the OsSC (trials with pending or negative evaluations have been excluded).

## **Clinical trials**

The data in question refers to those submitted to the OsSC between 1<sup>st</sup> January 2006 and 31<sup>st</sup> December 2010.

It is worth remembering that recent innovations have been introduced concerning the elaboration and presentation of tables:

- a different elaboration of the ATC classification of experimental drugs has been published. To date, registration to a OsSC study was definable by a 5<sup>th</sup> level ATC for the active ingredient: the table groups, for every 2<sup>nd</sup> ATC level , a list of molecules inversely ordering them by numerosness and their relative number of phase I, II and III studies where the molecule has been used;

- tables on trials per profit and no profit Sponsors have been illustrated with decreasing number of studies for the period 2006-2010. Each Sponsor is reported with the partial number of studies for the period 2006-2010.

### **Analysis on clinical trials**

Continuing the consolidated tradition of providing details on certain aspects, some points deemed important by the scientific community have been analysed.

*Phase I clinical trials:* a significant revival of this specific type of study is particularly visible. Numbers have gone from 2.4 to 8.0% of all clinical trials per year in just a handful of years. This is largely due to new procedures introduced by the Italian National Health Institute (competent authority for these studies), enabling to reduce the time needed for evaluation to the lowest international ones. Corporate Sponsors presented approximately 80% of these studies.

*Objectives of the clinical study:* these are inevitably related to the trial phase. What strikes us immediately is how the number of studies aiming at evaluating efficacy grows progressively (from phase I to III). What remains a high figure is the number related to safety (>85%). It's worth noting the portions relating to pharmacokinetics, pharmacodynamics and pharmacogenetics studies.

*Orphan drugs and rare diseases:* there has been a progressive growth in the number of studies in this sector over the last five years. They have gone from 5.3 to 10.0% of all clinical trials per year, highlighting the interest this sector offers. Almost every study has been a multicentre one (96.3%) and numerous have been international (87.2%). Given the difficulty to recruit, Sponsors have opted for this typology of study. The therapeutic area most covered has been oncology, where numerous rare diseases have been the focus of the studies.

*Substantial amendments:* it is worth underlining that each study is subject to more than one substantial amendment. Specifically the report

states the number as being 1:2.59. This is extremely burdensome on the Ethics committees, and it's concentrated on changes to the Clinical Trial Application (80.2%), to the protocol or other documents concerning the study. The main reasons are safety, rights, wellbeing or integrity of the persons participating in the trial or modifications to how the clinical study should be managed or carried out.

### Ethics committees

Also this year, this section contains detailed analyses of the regional distribution and on time to issue single opinions (for the coordinating centre) and to issue acceptance / refusal of the single opinion (for satellite centres). The reference period goes from 1<sup>st</sup> January 2007 to 31<sup>st</sup> December 2010.

## ***Clinical trials***

## ■ Summary of main results 2006-2010

**T**here have been 7,441 clinical trials approved by the coordinating Ethics committee between 1<sup>st</sup> January 2000 and 31<sup>st</sup> December 2010, entered in the OsSC. The following table illustrates their breakdown per year:

Year	# CT
2000	557
2001	605
2002	560
2003	568
2004	624
2005	664
2006	778
2007	795
2008	878
2009	752
2010	660
<b>Total</b>	<b>7,441</b>

This section of 10<sup>th</sup> National Report illustrates the data concerning the clinical trials approved by the coordinating Ethics committee since 1<sup>st</sup> January 2006, therefore analysing this last five years' activity.

As illustrated in the table above, there was a drop of 12.2% on the previous year concerning the

number of clinical trials. This drop was principally in the mono-centre studies.

However, this fact should be considered on a European scale: in 2010 every EU country faced a drop in the number of clinical trials approved, reaching a mere 4,193. Italy accounts for 660 of these (15.7%); this figure is identical to 2007 data when Italy performed 795 (15.8%) studies of the 5,028 studies carried out in Europe.

The number of phase I and II studies is still increasing compared to the total number of clinical trials in Italy, accounting for 45.4% in the last year (compared to 43.2% in 2009). Phase III studies reached 42.1% of clinical trials in 2010.

The percentage of multi-centre studies reached 83% of the total in 2010, with 75.4% of these being international studies.

The majority of drugs tested were chemical ones (79.4%), with a constant growth of biological/biotechnical ones (26.4%).

For each therapeutic classification, the principal molecules studied in phases I, II and III had a 5<sup>th</sup> ATC level when they were inserted in the OsSC, are listed. An analysis of patients enrolled in clinical trials shows that Italy represents 21.8% of the European total (17.9% in 2006).

Oncology is the therapeutic area mostly studied (30%), with its closest runner-ups being cardiology/vascular diseases (9.3%), neurology (9.1%) and immunology/Infectious diseases (7.8%).

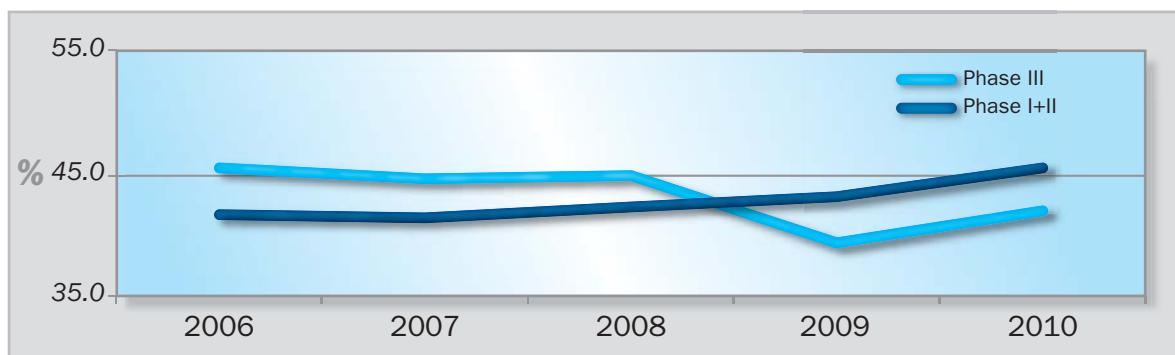

A relevant section has been dedicated to the centres involved in the clinical trials and their distribution per region and province. This highlights the large number of Lombardy centres performing clinical trials (in line with their high number of centres).

What used to be considered special analysis in previous editions (phase I studies, objectives of the clinical trials, studies on orphan drugs, rare diseases and substantial amendments) have become integrating parts of this Report. Instead, specific analyses have been made this year concerning female population and those incapable of giving their consent validly.

This year witnesses for the first time the inclusion of the analysis on observational studies. The national database shall be complete including this typology of research. This is fundamental to fully un-

derstand the use of new (and not only) drugs in a real practical clinical daily environment.

Lastly, an analysis on Ethics committees; despite the efforts to aggregate them so as to reach operative efficiency, Ethics committees remain too numerous often determining an unmanageable situation (especially concerning the acceptance/refusal of an opinion). With respect to the foregoing, we shall study with the assistance of regional administrations the guidelines to realign Italy to international standards.

**Table 4****Clinical trials per year: comparison EU with Italy**

Year	CT in EU	CT in Italy	% Italy/EU
2007	5,028	795	15.8
2008	4,618	878	19.0
2009	4,491	752	16.7
2010	4,193	660	15.7

The number of clinical trials in the EU according to EudraCT was reported in the Concept Paper drafted by the European Commission following the revision of the Directive on clinical trials 2001/20/EC ([http://ec.europa.eu/health/files/clinicaltrials/concept\\_paper\\_02-2011.pdf](http://ec.europa.eu/health/files/clinicaltrials/concept_paper_02-2011.pdf)).  
The number of clinical trials performed in Italy comes from the OsSC.

\* Investigational Medicinal Product

The same clinical trial may have numerous reasons for an early conclusion and therefore shall be counted more than once.

The following analysis is focussed on patients forecast and actually enrolled in clinical trials: every clinical trial that was concluded in OsSC in the 2006-2010 period is taken into consideration.

Please refer to the corresponding CTA on latest effective amendment for details on patients forecast in Italy.

Female	314	8.1
Male	184	4.8
<b>Total</b>	<b>3,863</b>	<b>100.0</b>

**Table 26*****Clinical trials per forecast age group***

Total CT: 3,863 of which 3,846 (99.6%) with age specified

Age group	CT	%
Adults (from 19 to 64 years of age)	3,549	92.3
OAPs (65+ years of age)	2,945	76.6
Minors (from 13 to 18 years of age)	351	9.1
Children (up to 12 years of age)	334	8.7

Enrolled subjects could fall into more than one age group; therefore the same trial may be counted more than once.

**Table 27****Clinical trials per drug typology**

Total CT: 3,863 of which 3,849 (99.6%) with ATC and typology of at least one test drug specified

Typology	CT	%
Chemical active ingredient	3,055	79.4
Biological/biotechnological active ingredient	1,016	26.4

The same clinical trial can involve more than one test drug and therefore shall be counted in more than one drug typology.

**Table 28****Clinical trials per drug category**

Total CT: 3,863 of which 3,844 (99.5%) with ATC and category of at least one test drug specified

Category	CT	%
Immunological medicinal product (vaccine, allergen, immune sera)	250	6.5
Radiopharmaceutical medicinal product	59	1.5
Other extractive medicinal product	57	1.5
Plasma derived medicinal product	28	0.7
Somatic cell therapy medicinal product	20	0.5
Herbal medicinal product	11	0.3
Gene therapy medicinal product	10	0.3
Homeopathic medicinal product	5	0.1
Medicinal product containing GMOs	4	0.1
Other	2,068	53.8

The same clinical trial can involve more than one test drug and therefore shall be counted in more than one drug category.

**Table 29****Clinical trials per therapeutic classification and phase**

Total CT: 3,863 of which 3,849 (99.6%) with ATC of at least one test drug specified

Therapeutic classification ATC 1 <sup>st</sup> level	CT	% Phase I Phase II Phase III Phase IV Bioeq/ Biod						Total

**Note Table 30**

The total number of ATC 1<sup>st</sup> level clinical trials (“CT” column) is higher than the number indicated in the subtitle because the same clinical trial may involve more than one test drug and therefore shall be counted in more than one ATC classification.

Likewise, regarding each therapeutic classification, the total number of ATC 2<sup>nd</sup> level clinical trials (“CT” column) can be higher than the ATC 1<sup>st</sup> level clinical trial number given that the same clinical trial may involve more than one test drug and therefore shall be counted more than once.

**Table 31****Clinical trials per therapeutic classification – ATC up to 5<sup>th</sup> level and Phases I, II and III**

Phase I, II and III CT: 3,329 of which 1,982 (59.5%)  
with ATC 5<sup>th</sup> level of at least one test drug specified

The table does not include active ingredients that were not classifiable as  
ATC 5<sup>th</sup> level when they were inserted in the OsSC.

**L - Antineoplastic and immunomodulating agents**

CT: 1,452 of which 988 (68.0%) with ATC 5<sup>th</sup> level of at least one test drug specified

The total number of ATC 2<sup>nd</sup> level clinical trials (“CT” column) is higher than the number indicated in the subtitle of each ATC classification because the same clinical trial may involve more than one test drug and therefore shall be counted more than once.

Likewise, regarding each ATC 2<sup>nd</sup> level classification, the total number of ATC 5<sup>th</sup> level clinical trials (“CT” column) can be higher than the ATC 2<sup>nd</sup> level clinical trial number given that the same clinical trial may involve more than one test drug and therefore shall be counted more than once.

20	Parma	293	7.6	5	61	49	16.7

Multi-centre clinical trials are carried out in more than one centre and therefore the same study shall be counted in more than one province in the "CT" column.

In the column "Centres involved" the number of centres participating in clinical trials is reported for each province. In this case each centre is counted only once, even if it is participating in more than one trial.

The numbers reported in the "Average CT per centre" column represent the average number of clinical trials each centre is carrying out per province. This number is calculated summing the studies performed in each centre, divided by the number of centres involved (see Table "Clinical trials per participating centre ordered by region and province").

The "CT coord." column reports the number of clinical trials whose coordinating centre is in the province (the sum of this column in the complete table corresponds to the national sample being one coordinating centre per clinical trial).

Multi-centre clinical trials are carried out in more than one centre and therefore the same study shall be counted more than once in the "CT" column.

The column "CT coord." reports the number of clinical trials for which the centre acts as coordinating centre (the sum of this column in the complete table corresponds to the national sample being one coordinating centre per clinical trial).

**Table 45****Clinical trials per participating centre ordered by region and province**

The sum of clinical trials per region (“CT” column) is higher than the national sample due to the fact that multi-centre trials are carried out in more than one centre and therefore shall be counted more than once.

Likewise, for every region, the sum of clinical trials per province (“CT” column) can be higher than the clinical trials per region and for every province, the sum of clinical trials per centre (“CT” column) can be higher than the clinical trials per province.

## **Analysis**

---

*Clinical trials on female population*

## ■ Summary of main results 2006-2010

Gender pharmacology is under close scrutiny these days, especially that aimed at women. Given the huge amount of data collected, even OsSC could not avoid back out of performing a specific analysis on clinical trials dedicated to the female population.

In the five-year period 2006-2010, there were 314 clinical trials carried out specifically in the female population in Italy, with over 64% of these concentrating on oncology.

It is worth underlining that there is a substantial

balance between the studies sponsored by pharmaceutical companies and no profit organisations. The majority of studies analysed efficacy and safety.

Moreover, there were 52 studies aimed at pregnant women, while 47 focussed on breastfeeding ones. The therapeutic area most analysed in this case was neurology.

The most involved regions in these trials were Lombardy, Emilia-Romagna, Lazio and Tuscany, in line with other clinical trials.

These numbers show a progressive increase in attention to gender pharmacology, which should hold some positive surprises for us in the future.

**Clinical trials exclusively involving women***(Clinical trials involving both genders are not included in this analysis)***Table 77****Clinical trials exclusively involving women per year and phase**

Valle d'Aosta	1	0.3	1	1	0	0.0

Multi-centre clinical trials are carried out in more than one centre and therefore the same study shall be counted in more than one region in the "CT" column.

In the "Centres involved" column the number of centres participating in clinical trials is reported for each region. In this case each centre is counted only once, even if it is participating in more than one trial.

The number reported in the "Average CT per centre" column represents the average number of clinical trials each centre is carrying out per region. This number is calculated summing the studies performed in each centre, divided by the number of centres involved.

The "CT coord." column reports the number of clinical trials whose coordinating centre is in the region (the sum of this column corresponds to the national sample being one coordinating centre per clinical trial).

**Table 83****Clinical trials exclusively involving women per typology of Sponsor: profit / no profit**

## **Analysis**

*Clinical trials involving patients  
incapable of validly submitting their consent*

## ■ Summary of main results 2006-2010

Pursuant to the European directive 2001/20, the legislative decree 211 of 2003 clearly stipulates the possibility to perform clinical trials on subjects incapable of validly submitting their consent.

In this analysis, clinical trials exclusively on paediatric patients and minors (i.e. the age group between 0 and 18 years of age) have not been taken into consideration following a verification of patients. Regarding these studies, the patient's parents should give the informed consent.

In the population of adults incapable of validly submitting their consent, this can be given by

their legal representative, administrator or appointed guardian.

There were 216 clinical trials held in the 2006-2010 period on this cluster of patients; the focus was on neurological studies (49 studies of which 35 in phase III), oncology (25 studies of which 11 in phase II and 11 in phase III), haematology (24 studies of which 10 in phase II and 10 in phase III) and then immunology and infectious diseases (22 studies).

Pharmaceutical companies account for 67.1% of the clinical trials, while 32.9% had a no profit Sponsor. In these typologies of studies, the objectives were always efficacy and safety (in both cases, 190 out of 216 studies).

The total number of ATC 1<sup>st</sup> level clinical trials (“CT” column) is higher than the number indicated in the subtitle because the same clinical trial may involve more than one test drug and therefore shall be counted in more than one ATC classification.

Likewise, regarding each therapeutic classification, the total number of ATC 2<sup>nd</sup> level clinical trials (“CT” column) can be higher than the ATC 1<sup>st</sup> level clinical trial number given that the same clinical trial may involve more than one test drug and therefore shall be counted more than once.

## ***Observational studies***

---

## **Summary of main results 1<sup>st</sup> March – 31<sup>st</sup> December 2010**

The guidelines issued by the Italian Medicines Agency in 2008, foresaw the creation of a Registry on Observational Studies (RSO). We are now able to present this data publicly, in line with the OsSC's common practices concerning transparency and coordination.

Firstly, these are some definitions to assist the comprehension of the following tables.

Regarding start-up date, the completion of all administrative/authorisation procedures (EC's opinion, signature of agreements, etc.) is considered, and therefore when the centre can officially be considered ready to perform the study.

Likewise, the conclusion of the study is when the last enrolled patient has been examined, where applicable; in the event there is no direct contact with the patients, the conclusion is the date defined by the protocol.

Studies under evaluation are those awaiting the opinion from the coordinating Ethics committee. While those under revision are studies that have a suspended evaluation (by the coordinating Ethics committee).

116 studies in the period 1<sup>st</sup> March to 31<sup>st</sup> December were registered and sent to the central database. The following analysis is focussed on 90 studies (of the 26 excluded, 24 were under evaluation, 1 had a negative single opinion and 1 was under revision).

There were 52 prospective studies (57.8%), 36 retrospective and 11 transversal. 97.8% of studies were carried out in public health structures; in 58 cases the Sponsor coincided with the Applicant, 36.2% of cases had a commercial Sponsor and 63.8% were performed by no profit organizations.

The most studied areas were neurology (20% of all cases), oncology (15.6%) and haematology (14.4%).

**Table 105****Studies per status**

Total studies: 116

Status	Studies	%
Approved by the coordinating EC	31	26.7
Notified	30	25.9
Open	29	25.0
Under evaluation	24	20.7
With negative single opinion	1	0.9
Under revision	1	0.9
Concluded	0	0.0
<b>Total</b>	<b>116</b>	<b>100.0</b>

**The following tables take into consideration only these studies:  
approved by the coordinating EC – notified – open – concluded**

**Table 106****Studies per typology**

Studies: 90

Typology	Studies	%
Prospective studies	52	57.8
Retrospective studies	36	40.0
Transversal studies	11	12.2

Each study could fall into more than one typology and therefore be counted more than once.

**Table 107****Studies per structures where they are performed**

Studies: 90

Structures	Studies	%
Public health structures	88	97.8
Private health structures	9	10.0
Specialist physicians	1	1.1
GPs and/or pediatricians	0	0.0

Each study can be performed in more than one structure and therefore be counted more than once.

**Table 108****Studies per design**

Studies: 90

Design	Studies	%
Cohort	62	68.9
Transversal	14	15.6

## *Ethics committees*

---

## ■ Summary of main results 2007-2010

The following pages contain an overview of the Ethics committees in Italy, and an analysis of their work with specific attention to the number of evaluations given and within which timeframe, for the period 2007-2010. All data derive from information entered in the OsSC.

Following the reorganisation of the health system in some Italian regions, the phenomenon of aggregation of Ethics committees spread in 2010, with the consequent decrease in numbers to a still high 245 (254 in 2009 and 269 in 2008). This is still far from what is happening in other European countries; indeed, our national average is approximately 1 EC per 250,000 inhabitants, while other EU countries have one EC for every 500,000. Lombardy is still the region with the highest number of Ethics committees, followed by Lazio, Sicily and Campania.

It is worth noting that the activity of these bodies is concentrated in only 66.1%. In fact, of the 245 Ethics committees in Italy, only 162 gave a single

opinion as a coordinator between 2007 and 2010. Of this subgroup, 19 gave at least one evaluation per month (48 in the four-year period). Regarding the acceptance/refusal of the single opinion, 241 satellite Ethics committees (3 of which are no longer operative) expressed their opinion: of these, 116 gave their opinion with an average evaluation time of one a month.

Data concerning the quantity of opinions given by Ethics committees is given in this section, together with the number of average days for this decision. Time is indeed a fundamental parameter to evaluate the work of these bodies on an international scale, and Italian legislation sets a clear timeframe for the completion of these evaluations.

National average times for issuing the single opinion is decreasing: the number has dropped from an average 45 days in 2007, to 36 in 2008, 26 in 2009 and 21 in 2010. An opposite trend has been experienced in the average times for issuing the acceptance/refusal of the single opinion, which was higher in 2010 than in previous years, and exceeding the foreseen times according to Italian regulations.

**Table 120*****Ethics committees per region and inhabitants***

Total EC: 245

Region	EC	%	Inhabitants on 31/12/2010*	Inhabitants/ EC

## Analysis on time necessary to issue the single opinion and the acceptance/refusal of the single opinion

**CT evaluated in the period 2007-2010:  
3,176 of which 668 mono-centre and 2,508 multi-centre CT**

In the following analyses regarding the time necessary to issue the single opinion and the acceptance/refusal of the single opinion, all cases where the date of reception of the application by the EC is equal to the date of the EC's meeting (days=0) and cases where the timeframe is greater than one year (days>365) have been excluded.

**Table 122**

***Single opinion per outcome and year***

SO granted: 3,176

Outcome	2007	2008	2009	2010	Total
Favourable SO	795	878	752	660	<b>3,085</b>
Unfavourable SO	20	16	25	30	<b>91</b>
<b>Total</b>	<b>815</b>	<b>894</b>	<b>777</b>	<b>690</b>	<b>3,176</b>

**Table 123**

***Average time to issue the single opinion per year***

SO granted: 3,176 of which 2,957 (93.1%) with a timeframe between 1 and 365 days

The time to issue the SO is calculated as being the difference between the EC's reception of the application and the date where the EC expressed its decision. In the event of a suspended decision, the date of reception of integrative information instead of the application (838 cases out of 3,176) is considered.

Average time to issue the SO (days)	2007		2008		2009		2010		Total	
	Avg.	Min-Max								
<b>SO issuing</b>	<b>45</b>	<b>1-344</b>	<b>36</b>	<b>1-300</b>	<b>26</b>	<b>1-337</b>	<b>21</b>	<b>1-246</b>	<b>33</b>	<b>1-344</b>
for multi-centre CT	42	1-344	35	1-300	26	1-244	20	1-246	31	1-344
for mono-centre CT	54	1-296	43	1-243	25	1-337	26	1-182	38	1-337

**Table 124*****Acceptance/refusal of the single opinion per outcome and year***

Multi-centre CT with acceptance/refusal of SO in at least one satellite centre: 2,519

Outcome	2007	2008	2009	2010	Total
Acceptance of SO	4,338	5,032	4,456	3,761	<b>17,587</b>
Refusal of SO	205	246	239	181	<b>871</b>
<b>Total</b>	<b>4,543</b>	<b>5,278</b>	<b>4,695</b>	<b>3,942</b>	<b>18,458</b>

**Table 125*****Median times to issue the acceptance/refusal of the single opinion per year***

Acceptance/refusal of SO: 18,458 of which 16,175 (87.6%) with a timeframe between 1 and 365 days

The time to issue the acceptance/refusal of the SO is calculated as being the difference between the day the EC expressed its final decision and:

- the date of reception of the application by the EC's satellite centre, if the SO issuing has occurred prior to the receipt of the application;
- the date of the SO issuing, if this has occurred after the date of reception of the application by the EC's satellite centre.

To these numbers, 7 days have been subtracted for the evaluation of the application.

Median time to issue the acceptance/refusal of the SO (days)	2007		2008		2009		2010		Total	
	Median	Min- Max								
Acceptance / refusal of the SO	35	1-365	32	1-365	35	1-364	40	1-365	35	1-365

As a synthetic indicator of times to issue the acceptance/refusal of the single opinion by the Ethics committees in these years, this year's Report has opted for the use of a median time for acceptance/refusal of the SO, in order to obtain a more stable number, less influenced by various anomalies.

**Table 126*****Ethics committees' activity per region***

Total EC: 245

Evaluations issued: 21,634 of which 3,176 (14.7%) SO  
and 18,458 (85.46%) acceptances/refusals of the SO

Region	CT evaluated	Evaluations issued			EC
		Total	SO	Acceptances/refusals of SO	
Abruzzi	347	437	58	379	4
Basilicata	139	165	9	156	4
Calabria	235	337	8	329	10
Campania	807	1,297	112	1,185	19
Emilia-Romagna	1,311	2,353	406	1,947	9
Friuli-Venezia Giulia	482	602	57	545	8
Lazio	1,457	2,581	432	2,149	34
Liguria	712	892	150	742	9
Lombardy	2,050	4,698	974	3,724	61
Marche	400	526	48	478	4
Molise	82	97	11	86	2
Piedmont	868	1,434	192	1,242	7
Puglia	583	1,001	54	947	13
Sardinia	316	409	27	382	11
Sicily	763	1,196	67	1,129	21
Tuscany	1,171	1,811	385	1,426	13
Trentino-Alto Adige	104	114	5	109	3
Umbria	364	427	56	371	1
Valle d'Aosta	19	20	0	20	1
Veneto	852	1,237	125	1,112	11
<b>Total</b>		<b>21,634</b>	<b>3,176</b>	<b>18,458</b>	<b>245</b>

Multi-centre clinical trials are evaluated by more than one EC and therefore the same study shall be counted in more than one region in the column "CT evaluated".

The columns relating to the "Evaluations issued" expresses per region the number of opinions given by the EC (SO and acceptances/refusals of SO). In the case of multi-centre CT, the same study shall be counted more than once due to the fact that it can be evaluated by different ECs in the same region or in different regions.

**Table 127*****Single opinions and average times to issue the opinion per Ethics committee and year***

Total EC: 245 of which 162 (66.1%) have issued at least 1 SO

The first 19 EC of 162 (11.7%) represent 53.0% of the SO issued

The time to issue the SO is calculated as being the difference between the EC's reception of the application and the date where the EC expressed its decision. In the event of a suspended decision, the date of reception of integrative information instead of the application (838 cases out of 3,176) is considered.

The analysis of average times can be influenced by suspended evaluations, even recurring suspension of the same CT prior to the issuing of the final decision. In these cases, if the date of reception of the integrating documentation is unknown, the calculation is based on the date of reception of the initial application.

**Table 128*****Acceptance/refusal of the single opinion and median times to issue the opinion per Ethics committee and year***

Total EC: 245 of which 238 (97.1%) have given at least one acceptance/refusal of the SO

The first 116 EC out of 238 (48.7%) represent 86.3% of the total acceptances/refusals issued

(the table includes 3 Ethics committees that gave evaluations in 2007 but are no longer operative)

The time to issue the acceptance/refusal of the SO is calculated as being the difference between the day the EC expressed its final decision and:

- the date of reception of the application by the EC's satellite centre, if the SO issuing has occurred prior to the receipt of the application;
- the date of the SO issuing if this has occurred after the date of reception of the application by the EC's satellite centre.

## **Appendix 1**

---

*Legislation*

## List of relative legislation regarding clinical trials of drugs as at 31<sup>st</sup> December 2010

### **Ministerial decree 14<sup>th</sup> July 2009**

O.J. n. 213 of 14<sup>th</sup> September 2009

Minimum requirements for insurance contracts for patients participating in clinical trials of drugs.

### **AIFA Specification of 23<sup>rd</sup> December 2008**

O.J. n. 3 of 5<sup>th</sup> January 2009

Self-certification of minimum requirements for the Contract Research Organisations (CRO) for clinical trials of drugs according to article 7, commas 5 & 6 and article 8 of the ministerial decree of 31<sup>st</sup> March 2008.

### **Ministerial decree 7<sup>th</sup> November 2008**

O.J. n. 80 of 6<sup>th</sup> April 2009

Modifications and integrations to the decrees of 19<sup>th</sup> March 1998, referring to "Recognition of centre's suitability for clinical trials of drugs"; 8<sup>th</sup> May 2003 regarding "Therapeutic use of drugs undergoing clinical trials", and 12<sup>th</sup> May 2006 concerning "Minimum requirements for the Ethics committees' structure, organization and functioning for clinical trials of drugs".

### **Ministerial decree 31<sup>st</sup> March 2008**

O.J. n. 279 of 28<sup>th</sup> November 2008

Definition of the minimum requirements for CRO involved in clinical trials of drugs.

### **Errata to AIFA Specification of 20<sup>th</sup> March 2008**

O.J. n. 82 of 7<sup>th</sup> April 2008

Communication regarding the specification of 20<sup>th</sup> March 2008 of the Italian Medicines Agency, concerning "Guidelines for the classification and carrying out of observational studies on drugs".

### **AIFA Specification of 20<sup>th</sup> March 2008**

O.J. n. 76 of 31<sup>st</sup> March 2008

Guidelines for the classification and carrying out of observational studies on drugs.

### **Ministerial decree 21<sup>st</sup> December 2007**

O.S. n. 51 to the  
O.J. n. 53 of 3<sup>rd</sup> March 2008

Directions for submitting the request for authorisation of a clinical trial on a medicinal product for human use to the Competent Authority, for communicating substantial amendments, for declaring the end of the trial and for the request of an opinion to the Ethics Committee.

### **Government decree n. 200 of 6<sup>th</sup> November 2007**

O.S. n. 228/L to the  
O.J. n. 261 of 9<sup>th</sup> November 2007

Transposition of Directive 2005/28/EC laying down principles and detailed guidelines for good clinical practice as regards investigational medicinal products for human use, as well as the requirements for authorisation of the manufacturing or importation of such products.

### **Ministerial decree 12<sup>th</sup> May 2006**

O.J. n. 194 of 22<sup>nd</sup> August 2006

Minimum requirements to set up, organise and run an Ethics committee for clinical trials of drugs.

### **Ministerial decree 17<sup>th</sup> December 2004**

O.J. n. 43 of 22<sup>nd</sup> February 2005

Prescriptions and conditions of a general nature referring to the conduct of clinical trials of medicines with special reference to those designed to enhance clinical practice as an integral part of health and medical care.

**Government decree n. 211 of 24<sup>th</sup> June 2003**  
**O.S. n. 130/L to the**  
**O.J. n. 184 of 9<sup>th</sup> August 2003**

Transposition of Directive 2001/20/EC relating to the implementation of good clinical practice in the conduct of clinical trials on medicinal products for clinical use.

**Ministerial decree 8<sup>th</sup> May 2003**  
**O.J. n. 173 of 28<sup>th</sup> July 2003**

Therapeutic use of drugs undergoing clinical trials.

**CIRC. n. 6 of 2<sup>nd</sup> September 2002**  
**O.J. n. 214 of 12<sup>th</sup> September 2002**

Activities of Ethics committees pursuant to ministerial decree of 18<sup>th</sup> March 1998.

**Decree of the I.S.S. President**  
**26<sup>th</sup> April 2002**  
**O.J. n. 105 of 7<sup>th</sup> May 2002**

Verification of composition and harmlessness of new drugs prior to clinical trials on humans. Identification of documentation to be submitted to ISS pursuant to article 4, comma 2 of the President of the Republic's Decree n. 439 of 21<sup>st</sup> September 2001.

**Presidential Decree n. 439**  
**of 21<sup>st</sup> September 2001**  
**O.J. n. 294 of 19<sup>th</sup> December 2001**

Simplified regulations for verification and control procedures on new systems and protocols for clinical trials.

**Ministerial decree 30<sup>th</sup> May 2001**  
**O.J. n. 216 of 17<sup>th</sup> September 2001**

Inspections on the due following of regulations concerning good manufacturing and good clinical practices.

**Ministerial decree 10<sup>th</sup> May 2001**  
**O.J. n. 139 of 18<sup>th</sup> June 2001**

Controlled clinical trials in general practice and paediatrics.

**Ministerial decree 28<sup>th</sup> December 2000**  
**O.J. n. 4 of 5<sup>th</sup> January 2001**

Measures aimed at minimising the risk of infecting humans, by drugs, with agents that cause bovine spongiform encephalopathy (mad cow).

**Decree 25<sup>th</sup> May 2000**  
**O.J. n. 133 of 9<sup>th</sup> June 2000**

Computerised sending of data concerning clinical trials of drugs.

**Ministerial decree 23<sup>rd</sup> November 1999**  
**O.J. n. 21 of 27<sup>th</sup> January 2000**

Composition and determination of the national Ethics committee's function for clinical trials of drugs, pursuant to legislative decree n. 229 of 19<sup>th</sup> June 1999.

**CIRC. n. 16 of 12<sup>th</sup> October 1999**  
**O.J. n. 255 of 29<sup>th</sup> October 1999**

Irregularities in the authorisation process and in the conduct of clinical trials of drugs.

**Ministerial decree 13<sup>th</sup> May 1999**  
**O.J. n. 174 of 27<sup>th</sup> July 1999**

Integration to the ministerial decree of 18<sup>th</sup> March 1998 concerning "Means for exemption of verifications for drugs used in clinical trials" and to the ministerial decree of 19<sup>th</sup> March 1998 concerning "Recognition of centre's suitability for clinical trials of drugs".

**CIRC. n. 6 of 8<sup>th</sup> April 1999**  
**O.J. n. 90 of 19<sup>th</sup> April 1999**

Clarifications on the ministerial decrees of 18<sup>th</sup> and 19<sup>th</sup> March 1998 published in the Official Journal n. 123 of 28<sup>th</sup> May 1998.

**Ministerial decree 20<sup>th</sup> January 1999**  
O.J. n. 31 of 8<sup>th</sup> February 1999

Measures regarding marketing and clinical trials of drugs containing materials derived from cows.

**Ministerial decree 7<sup>th</sup> October 1998**  
O.J. n. 274 of 23<sup>rd</sup> November 1998

Integrations to the attachment to ministerial decree of 19<sup>th</sup> March 1998 concerning "Recognition of centre's suitability for clinical trials on drugs".

**Ministerial decree 15<sup>th</sup> September 1998**  
O.J. n. 222 of 23<sup>rd</sup> September 1998

Integration to the ministerial decree of 18<sup>th</sup> March 1998 concerning "Means for exemption of verifications on drugs used in clinical trials".

**Ministerial decree 19<sup>th</sup> March 1998**  
O.J. n. 122 of 28<sup>th</sup> May 1998

Recognition of centre's suitability for clinical trials on drugs.

**Ministerial decree 18<sup>th</sup> March 1998**  
O.J. n. 122 of 28<sup>th</sup> May 1998

Means for exemption of verifications on drugs used in clinical trials.

**Ministerial decree 22<sup>nd</sup> December 1997**  
O.J. n. 33 of 10<sup>th</sup> February 1998

Residual tariffs pursuant to ministerial decree of 19<sup>th</sup> July 1993 concerning the compensation for the Ministry of Health, ISS and Institute for Safety at Work for the services given by these institutes.

**Ministerial decree 15<sup>th</sup> July 1997**  
O.S. n. 162 to the  
O.J. n. 191 of 18<sup>th</sup> August 1997

Implementation of EU guidelines for good clinical practice in carrying out clinical trials of drugs (*the attachments thereto substitute the attachments to Ministerial decree of 27<sup>th</sup> April 1992*).

**Presidential Decree 14<sup>th</sup> January 1997**  
O.S. n. 37 to the  
O.J. n. 42 of 20<sup>th</sup> February 1997

Approval of the act of establishment and coordination of the regions and autonomous provinces of Trento and Bolzano regarding structural, technological and organisational minimum requirements for carrying out public health activities in public and private centres.

**Ministerial decree 4<sup>th</sup> December 1990**  
O.J. n. 297 of 21<sup>st</sup> December 1990

Modifications to Ministerial decree 23<sup>rd</sup> June 1981 concerning the rules of scientific information on drugs.

The entire list of documents concerning legislation in force is available online at the PRC website  
(Clinical Research on Drugs Portal in Italy)  
<http://ricerca-clinica.agenziafarmaco.it/it/node/3>

## **Appendix 2**

---

Glossary

## Glossary

### Active substance or active ingredient

The pharmacologically active component in a drug, responsible for the desired effect of the drug itself.

### Adverse event

Any untoward medical occurrence in a patient or clinical trial subject administered a medicinal product and which does not necessarily have a causal relationship with this treatment.

### Adverse reaction

Any damaging or undesired reaction to a drug during the clinical trial, regardless of the dose administered.

### AIFA calls for independent research

These are aimed at public or no profit health structures. Research is financed by AIFA using a part of the 5% fund of promotional costs borne by pharmaceutical companies, as foreseen by the AIFA by-laws (L. 326/2003).

The areas of research in the calls are as follows:

- studies on orphan drugs and rare diseases (not foreseen in the 2008 and 2009 calls);
- comparisons between therapeutic strategies for high impact problems relating to public health and the public health system;
- studies on the safety of drugs, and evaluations of training and information to improve the impact of appropriate use.

### ATC

*Anatomic, Therapeutical, Chemical Classification*  
Alpha-numerical classification system according to the World Health Organisation (WHO) standard. This system divides drugs into 14 groups main “Anatomical” (1<sup>st</sup> level) with two sub-groups “Therapeutic” (2<sup>nd</sup> and 3<sup>rd</sup> levels).

The ATC classification includes two further sub-groups “Chemical/therapeutic” and “Chemical” for a total of five hierarchical levels following this scheme:

1<sup>st</sup> Level – Main Anatomical Group (distinguished by the letters: A, B, C, D, G, H, J, L, M, N, P, R, S, or V)

2<sup>nd</sup> Level – Main Therapeutic Group (distinguished by a double-digit number)

3<sup>rd</sup> Level – Sub-group Pharmacological Therapeutic (distinguished by a letter of the alphabet)

4<sup>th</sup> Level - Sub-group Chemical Pharmacological Therapeutic (distinguished by a letter of the alphabet)

5<sup>th</sup> Level - Sub-group Chemical (distinguished by a double-digit number, specific to each chemical substance).

Example of diazepam's classification (ATC = N05BA01):

N	Nervous system
_ 05	Psycholeptics
_ B	Anxiolytics
_ A	Benzodiazepine derivatives
_ 01	Diazepam

### Biotechnological active ingredient

An active ingredient responsible for the drug's expected effect produced by biotechnology.

### Biotechnology

The use of biological organisms, systems or processes for producing medicines.

### Chemical active ingredient

A chemical active ingredient in a drug.

### Clinical trial (or clinical study)

Any investigation in human subjects intended to discover or verify the clinical, pharmacological and/or other pharmacodynamic effects of one or more investigational medicinal product(s), and/or to identify any adverse reactions to one or more investigational medicinal product(s) and/or to study absorption, distribution, me-

tabolism and excretion of one or more investigational medicinal product(s) with the object of ascertaining its (their) safety and/or efficacy. This definition includes clinical trials conducted at a single centre (mono-centre) or a number of centres (multi-centre), only in Italy or also in other member states of the European Union.

### Clinical trial of bioequivalence and bioavailability

This is a study to evaluate the percentage of drug administered that reaches the systemic circulation (bioavailability) and the equivalence of other formulations (bioequivalence).

### Clinical trial protocol

The document that describes the rationale, objectives, methods and procedures for the correct conduct of a clinical trial.

### Comparator medicinal product

A drug that can be commercialised or a placebo, used as a comparator in a clinical trial with a controlled design.

### Competent Authority

The director general or legal representative of public health structures or similar where clinical trials are carried out (legislative decree n. 211 of 2003); the general manager of the local health unit in the private structure with authorisation to perform clinical trials pursuant to ongoing legislation.

The Italian Medicines Agency is the competent authority for authorisations regarding clinical trials on products for somatic cell therapy, gene therapy and drugs containing genetically modified organisms. The ISS is the competent authority for new drugs, pursuant to the President of the Republic's Decree n. 439 of 21<sup>st</sup> September 2001, and all Phase I clinical trials.

### Controlled clinical trial

A controlled clinical trial is one where the drug is tested with a control group. The control group can

be administered with a placebo, a product whose efficacy is known, a surgical procedure or a different dosage of the same drug.

### Coordinating centre of the clinical trial

Centre identified by the Sponsor where the Italian coordinator for the clinical trial carries out his/her work.

### CRO

Contract Research Organization

A company, institution or organisation (commercial, academic or other) with whom the Sponsor has stipulated a contract to entrust a part or its entire responsibilities regarding the clinical trial (drafting of protocol, selection of centres and investigators, choice and use of a monitor, elaboration of reports, statistical analysis, preparation of documentation to submit to the supervisory authority, etc.) as foreseen by the Good Clinical Practices, notwithstanding the responsibilities of the Sponsor relating to the clinical trial itself.

### Cross over

Comparison between two or more treatments in which the participants in the clinical trial, following a certain period of time established by the protocol, switch from one treatment to an alternative one.

### CTA

Clinical Trial Application

Application for authorisation to perform a clinical trial (Ministerial Decree 21<sup>st</sup> December 2007).

CTA form

Form to apply for the authorisation to perform a clinical trial or for the opinion of the Ethics committee.

### Dose-response

The dose-response relationship shows the variations of the effect of the drug, following a period of administration. This relation is applicable to individuals and populations.

**Double blind**

Clinical trial in which both the investigator and the subject involved in the study (healthy volunteer or patient) are not aware of the treatment received.

**Efficacy**

Measurement that indicates whether the drug has given the desired result.

**EMA**

European Medicines Agency

**E-submission**

Computerised procedure for sending with a digital signature the documentation regarding the application (CTA), authorisation of the competent authority and opinion of the Ethics committee for monitoring the clinical trial.

**Ethics committee**

An independent body, consisting of healthcare professionals and non-medical members, whose responsibility it is to protect the rights, safety and wellbeing of human subjects involved in a trial and to provide public assurance of that protection, by, among other things, expressing an opinion on the trial protocol, the suitability of the investigators and the adequacy of facilities, and on the methods and documents to be used to inform trial subjects and obtain their informed consent. The EC can be set up in one or more public health structure or similar, in a private IRCCS or in the office of the regional administration for these matters. The Ethics committee is also responsible for:

- carrying out the revision and expressing a favourable/unfavourable opinion regarding the clinical trial's protocol;
- evaluating proposed substantial amendments and giving its favourable/unfavourable opinion;
- verifying the suitability of the investigator(s), the centres, methods and materials used to obtain and document the informed consent of the clinical trial's participants.
- periodically evaluate approved clinical trials.

**EU**

European Union.

**EudraCT**

European Union Drug Regulatory Authorities Clinical Trials database

A database set up on 1<sup>st</sup> May 2004 at EMA pursuant to the Directive 2001/20/EC, which collects all the data for every clinical trial on drugs involving at least one clinical centre in the European Union.

This is a confidential registry and it is accessible to the competent authorities of member States, and EMA European Commission.

**EudraCT code**

Unique identification number of every clinical trial in the European database EudraCT, assigned free of charge, and to be requested via computer through the site <https://eudraact.ema.europa.eu>.

**Extractive medicinal product**

A medical product obtained by extraction. This can include biological/biotechnological products, human blood or plasma derivatives, extracts from animals, bacterial extracts and toxins or other extracted vegetable or similar active ingredients.

**GCP**

Good Clinical Practice

An international standard of ethics and scientific quality to plan, carry out, register, and report clinical studies on humans.

Adhering to these GCP standards publicly guarantees not only the rights, safety and wellbeing of the enrolled subjects in line with the principles established in the Declaration of Helsinki, but it also guarantees the reliability of the data concerning the clinical trial.

**Gene therapy medicinal product**

A product for transferring a gene to a human for

its expression in vivo for protective purposes, diagnostic or therapeutic.

### GMO

A Genetically Modified Organism (GMO) or a Genetically Engineered Organism (GEO) is an organism whose genes have been modified using genetic engineering.

### Healthy volunteer

A subject in good health enrolled in a clinical trial.

### Herbal medicinal product

A medicinal product using a vegetable or preparation of a vegetable active ingredient.

### Homeopathic medicinal product

A drug obtained from homeopathic substances or preparations or similar, in accordance with the production process outlined in the European Pharmacopoeia or, in its absence, official Pharmacopoeia used in EU member States; a homeopathic drug may contain more than one substance.

### Immunological medicinal product

Drug used to produce an immunological response (vaccines, toxins, sera or allergens).

### IMP

Investigational Medicinal Product

A pharmaceutical form of an active substance or placebo being tested or used as a reference in a clinical trial, including products already with a marketing authorisation but used or assembled (formulated or packaged) in a way different from the authorised form, or when used for an unauthorised indication, or when used to gain further information about the authorised form.

### Informed consent

Decision, which must be written, dated and signed, to take part in a clinical trial, taken freely after be-

ing duly informed of its nature, significance, implications and risks and appropriately documented by any person capable of giving consent or, where the person is not capable of giving consent, by his or her legal representative or by an authority, individual or organisation in accordance with the relevant legislation. If the person concerned is unable to write, oral consent in the presence of at least one witness may be given in exceptional cases, as provided for in current legislation.

### Interventional clinical trial

Clinical trial where a subject is previously assigned to a specific therapeutic strategy based on the clinical protocol.

### Investigator

A doctor or dentist qualified for investigations, who is responsible for the conduct of the clinical trial at a given centre. If a trial is conducted by a team of individuals at a trial centre, the investigator is the leader responsible for the team and may be called the "principal investigator".

### ISS

*Istituto Superiore di Sanità*

The main technical-scientific body of the National Health System. This is a public body uniting the functions of research and consultancy, training and control to protect public health.

### No profit sponsor

Structure, body or public institution or similar or foundation or moral institution or no profit research and/or health institute or public or private Scientific Institutes for Research and Care (IRCCS) or employee of the aforesaid structures who carries out the role of Sponsor within his/her institutional duties.

### Non-interventional clinical trial or observational study

A study where the medicinal product(s) is (are) prescribed in accordance with the terms of the

marketing authorisation. The assignment of the patient to a particular therapeutic strategy is not decided in advance by a trial protocol but falls within current practice and the prescription of the medicine is clearly separated from the decision to include the patient in the study.

No additional diagnostic or monitoring procedures shall be applied to the patients and epidemiological methods shall be used for the analysis of collected data.

#### **Objective of the trial**

Definition per category of the clinical trial objective (efficacy, safety, pharmacokinetics, pharmacogenetics, etc.).

#### **Open clinical trial**

A clinical trial where both the investigators and the enrolled subjects are aware of the treatment administered.

#### **Orphan drug**

Potentially useful product for treating a rare disease whose profits would not justify research and development costs. EMA establishes which drugs are orphan drugs.

#### **OsSC**

Osservatorio nazionale sulla Sperimentazione Clinica dei medicinali.

National Monitoring Centre on Clinical Trials of Drugs.

Database that collects information concerning clinical trials held in Italy since 2000.

#### **Parallel groups**

A clinical trial where two or more treatments are evaluated simultaneously in distinct groups of patients.

#### **Pharmacodynamics**

Studies the effects a drug has on a living body.

#### **Pharmaco-economics**

Studies the costs and the effects the use of a particular drug would have on the national health service comparing one therapy to other available ones.

#### **Pharmacogenetics**

Studies the genetic factors that produce different responses to the same drug.

#### **Pharmacogenomics**

Studies the genetic variations that affect the responses to a drug.

#### **Pharmacokinetics**

Studies what a living body does to a drug.

#### **Phase I clinical trial**

The first moment of clinical development of a new active ingredient that includes the first administration of this product in humans.

Phase I trials involve a small number of subjects (up to 30 persons) frequently healthy volunteers but also patients.

They usually do not have a therapeutic objective given that they are preliminary studies on the safety and tolerability of an experimental drug. Phase I also includes pharmacokinetics studies and may also include pharmacodynamics.

#### **Phase I - First in human clinical trial**

Administration of the drug for the first time in humans during a phase I clinical trial.

#### **Phase II clinical trial**

A pilot therapeutic study whose objective is to demonstrate the activity and evaluate the short-term safety of an active ingredient in patients suffering from a disease or with a clinical condition that the active ingredient was developed for.

The study is carried out on a limited number of patients (between 100 and 300) and it is often in an advanced stage with a comparative control group

(e.g. control with placebo). This phase also has the objective of determining an appropriate level of dosage and/or therapeutic schemes and (if possible) the dose/response relationship in order to plan more extensive therapeutic studies.

#### Phase III clinical trial

This is a study on a larger group of patients (usually several hundred and sometimes several thousand) – and possibly diversified – to compare the effects of the new treatment against a placebo or a standard treatment used in clinical practice. The trend and characteristics of the most frequent adverse reactions need to be investigated and the experimental medicines characteristics need to be examined (clinically revealed interaction with other drugs, responses to particular factors such as age, etc.). Phase III clinical trials are usually randomised and double blind, and are carried out in numerous centres and in different countries simultaneously.

#### Phase IV clinical trial

A study on a commercialised drug (post-marketing) to evaluate its therapeutic value and/or damaging effects (pharmacovigilance), in a normal prescription context.

#### PI

Principal Investigator.

#### Placebo

A control substance that does not contain an active ingredient, known to have no effects (fake treatment). This is administered to persons taking part in some clinical trials.

#### Plasma derived medicinal product

Drug produced from blood or plasma.

#### Private centre

Private health structure recognised for health assistance and/or suitable for running clinical trials,

by the local health unit for one or more specialist branches of health assistance.

#### Profit sponsor

Industry or pharmaceutical company or profit private company (excluding private IRCCS).

#### Protocol code

Unique identification number of a protocol assigned by the Sponsor.

#### Radiopharmaceutical medicinal product

A radioactive drug made of radionuclides for diagnostic or therapeutic purposes.

#### Randomised

A clinical trial where subjects are randomly assigned to one of the treatment group.

#### Rare disease

A disease that affects a very limited number of patients. The European limit is a disease that affect 5 persons every 10,000 (European definition based on the indications of “European Community Programme of Action for Rare Diseases 1999-2003”).

#### RSO

*Registro Studi Osservazionali.*

Registry of all observational studies on drugs carried out in Italy, set up according to specific guidelines set out by AIFA with its specification on 20<sup>th</sup> March 2008 (<http://osservazionali.agenziafarmaco.it/>).

#### Safety

Tolerance profile of a drug, defined by its adverse effects.

#### Satellite or collaborating centre

Centre that participates in a multi-centre clinical trial where the coordinator does not operate.

**Single blind**

Clinical trial where subjects (healthy volunteers or patients) in the trial do not know which treatment they are taking, while investigators are aware of this.

**Single Opinion**

The opinion on a multi-centre clinical trial expressed by the Ethics committee of the Italian structure where the clinical trial's coordinator performs the trial.

**Somatic cell therapy medicinal product**

Use of live somatic cells from the patient him/herself, foreign (from another human being) or xenogenic (from animals), whose biological characteristics have been substantially modified as a result of their manipulation to obtain a therapeutic, diagnostic or protective effect.

**Source of financing or material support to the clinical trial**

Any (public or private) organisation or pharmaceutical company that provides economic financing or material support for the carrying out of the clinical trial.

**Sponsor**

An individual, company, institution or organisation which takes responsibility for the initiation, management and/or financing of a clinical trial.

**Sponsor's legal representative**

Person, company, institution or organisation authorised to act on behalf of the Sponsor in a clinical trial. This body must be registered in the EU or EC (article 20, legislative decree n. 291 of 2006).

**Structure**

Synonym of health centre.

**Subject**

An individual who participates in a clinical trial as either a recipient of the investigational medicinal product or a control. The subject may be a healthy volunteer or a patient.

**Subject incapable of giving their consent**

A subject to be enrolled in a clinical trial who is incapable of personally giving his/her consent (e.g. minors or subjects with mental illnesses).

**Substantial amendment to the protocol**

An amendment that affects the safety of the subjects in the clinical trial or modifies the interpretation of the scientific support documentation for the clinical trial, or an amendment that significantly modify the way the clinical trial is carried out.

## **Appendice 3**

---

*Training*

## Workshops and Training Courses for clinical trials on drugs organised by the Italian Medicines Agency

**2010**

*16-17<sup>th</sup> March, Rome*

“Meeting on the carrying out of no profit studies financed by AIFA”.

**2009**

*6-8<sup>th</sup> July, Rome*

“Course on Clinical Trials”.

In collaboration with Ga<sup>2</sup>len – EAACI Summer School.

*22, 23, 29 and 30<sup>th</sup> April, Rome*

“National Monitoring Centre on clinical trials of drugs (OsSC) – Powers and functions for Ethics Committees”

*12, 13, 19, 20, 26 and 27<sup>th</sup> February, Bologna*

“National Monitoring Centre on clinical trials of drugs (OsSC) – Powers and functions for Ethics Committees”

**2008**

*3<sup>rd</sup> June, Rome*

“CTA - Clinical Trial Application – Ministerial Decree 21<sup>st</sup> December 2007”. For Ethics Committees Pharmacologists.

*13-16<sup>th</sup> May, Rome*

“CTA - Clinical Trial Application – Ministerial Decree 21<sup>st</sup> December 2007”. For no profit Sponsors, pharmaceutical company Sponsors and Clinical Research Organisations (CRO).

*17-20<sup>th</sup> March, Rome*

“CTA - Clinical Trial Application – Ministerial Decree 21<sup>st</sup> December 2007”. For Ethics Committees.

**2007**

*16-18<sup>th</sup> April, Rome*

“Course for promoting GCP and to improve the quality of clinical trials not for commercial purposes”.

*22-24<sup>th</sup> January, Rome*

“Course for promoting GCP and to improve the quality of clinical trials not for commercial purposes”.

**2006**

*4-6<sup>th</sup> December, Rome*

“Course for promoting GCP and to improve the quality of clinical trials not for commercial purposes”.

*20-22<sup>nd</sup> November, Rome*

“Course for promoting GCP and to improve the quality of clinical trials not for commercial purposes”.

*8<sup>th</sup> February, Rome*

National Conference - “Clinical Research and Innovation in the pharmaceutical sector”. Inside SANIT – Convention of Health Services .

**2004**

*9<sup>th</sup> July, Rome*

“Ethics Committees and observational research: theory and practice”.

In collaboration with Italian Company of Medical Statistics and Clinical Epidemiology.

**2003**

*28<sup>th</sup> November, Rome*
